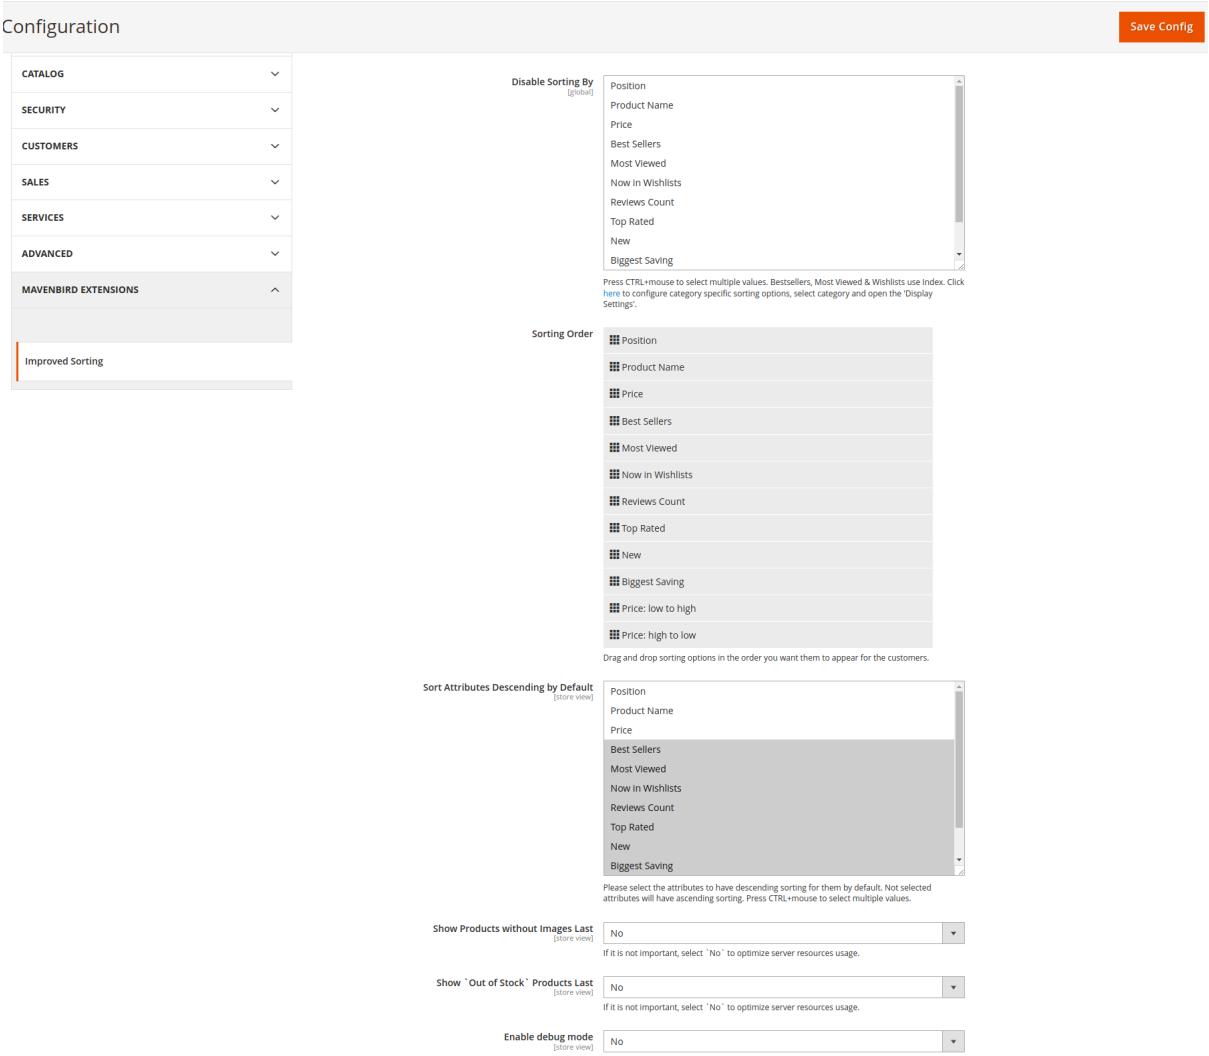
General Configuration 3

Sorting on frontend 9

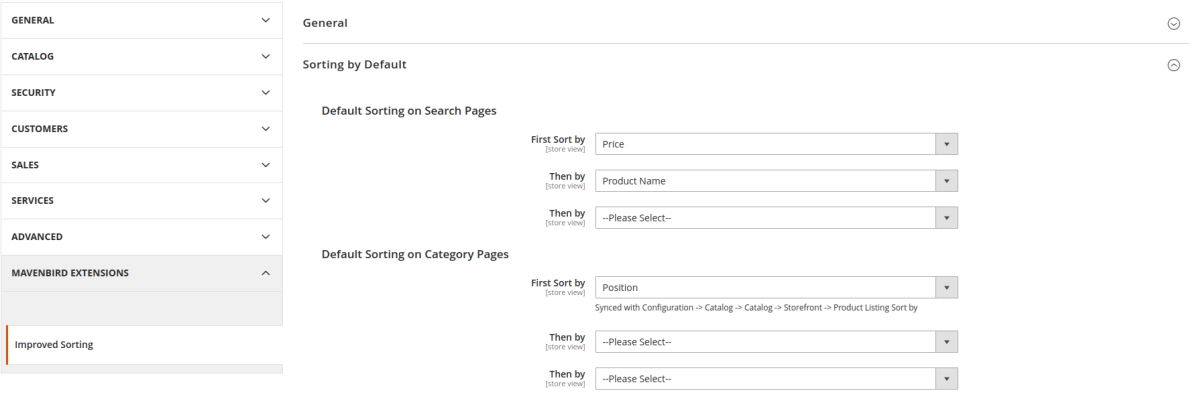
Support 9

General Configuration

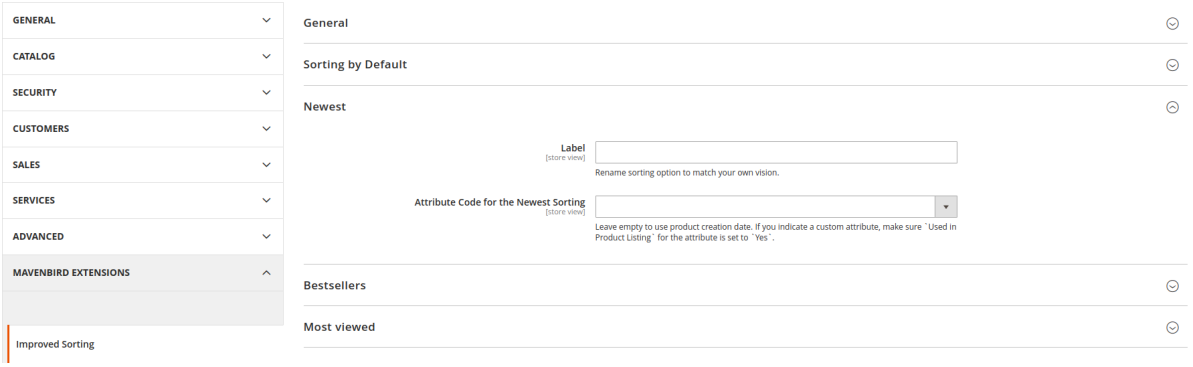
For module configuration, go to **Stores → Configuration → Mavenbird Extensions → Improved Sorting.**



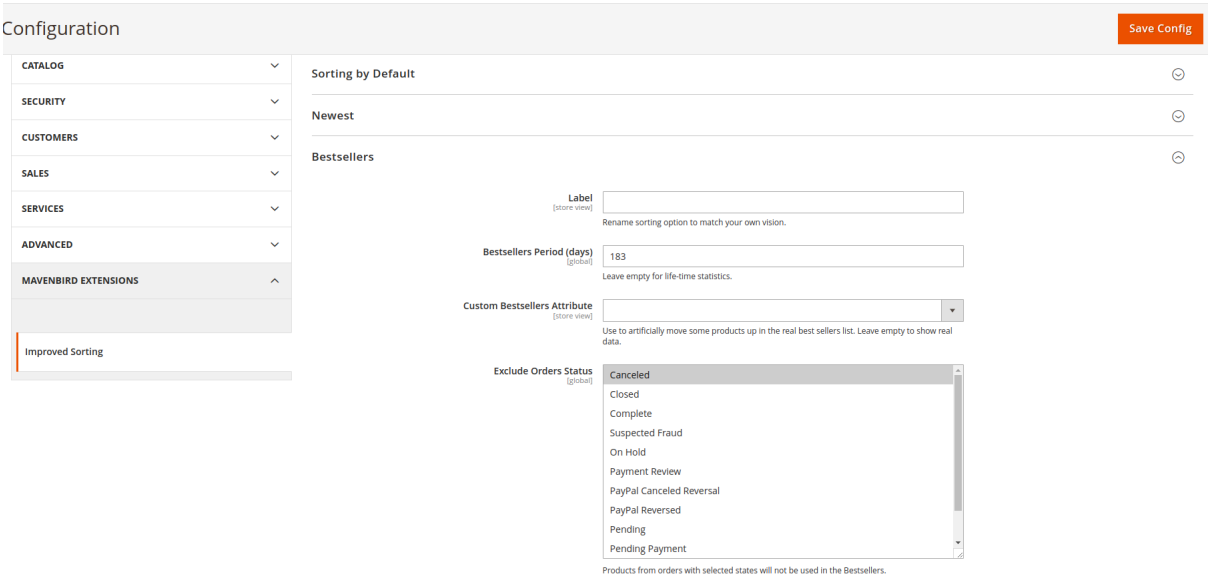
Disable Sorting By - if necessary, exclude any sorting option.Sorting Order - Drag-and-drop sorting options to make them appear in the improved customer-sorting drop down.



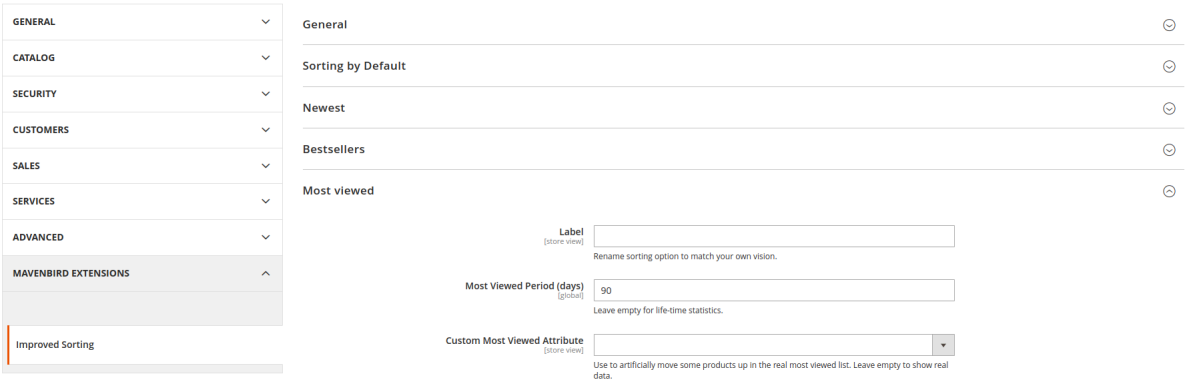
- Please choose the default descending attributes for them. No ascending sorting will be given to selected attributes.
- Show Products without Images Last - to efficiently control your inventory, show or hide products without images.
- Show ‘Out of Stock’ Products Last - select the variant to maximise the 'Out of Stock' product role.
- Use qty to determine if the product is `Out of Stock`- allow this option to automatically place products on the 'out of stock' list. Products of qty < 1 are last shown irrespective of the stock label.



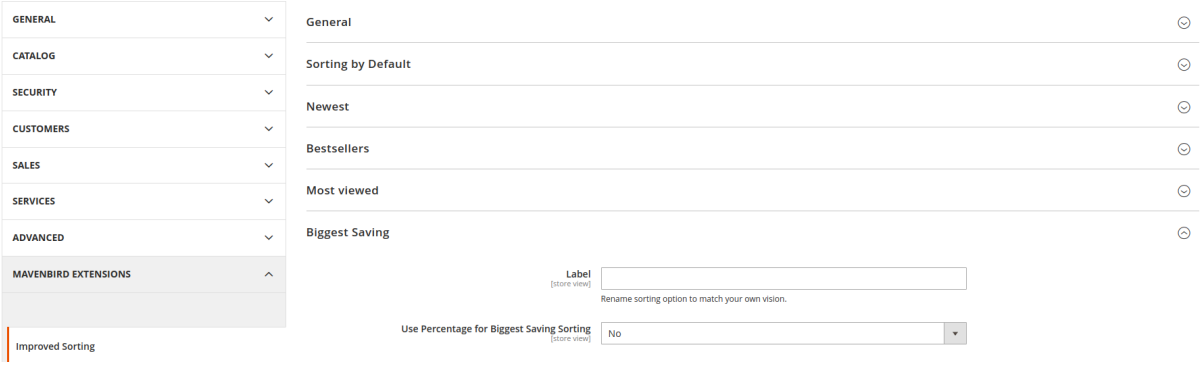
- Label - specify the sorting option name on the frontend you would like.
- Attribute Code for the Newest Sorting - Leave the date of creation empty to use. Make sure that the 'Used in the Product Listing' is set for 'yes' if you specify a custom attribute.



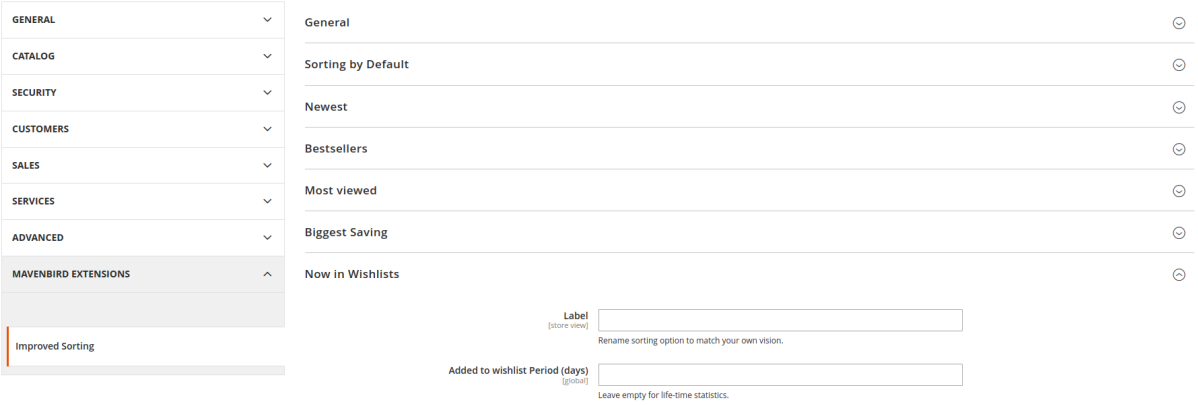
- Bestsellers - Shows statistically best-selling products.
- Bestsellers Period (days) - For the time specified here the sorting option shall be counted. So if you specify here '15,' you can count sales for the last 15 days and set the order for the bestseller sorting option by count.Leave your statistics vacant for lifetime.
- Custom Bestsellers Attribute - to move products manually in the bestseller list select a custom bestseller attribute.
- Exclude Orders Statuses - the Bestsellers shall not be used for products with specified order statuses.



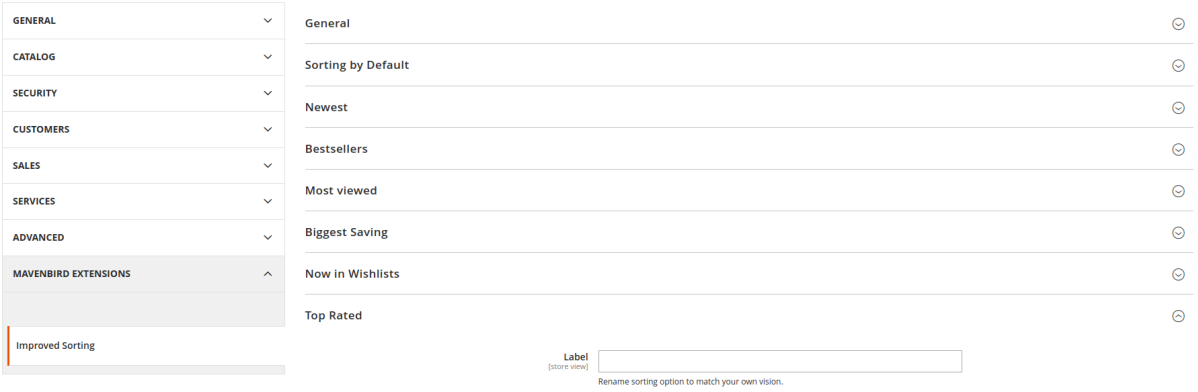
- Most viewed - products are displayed in accordance with the number of views. For the period indicated by the Most Viewed Period, this sorter option is counted (days). Don't forget to rename your own vision sorting option.
- Custom Most Viewed Attribute - use some products in the real most viewed list to move artificially. Let the actual data appear empty.



- ‘Biggest Saving’ - shows at the top of the list products with the biggest discount. To show the difference between regular and special prices, you can use the percentage or the absolute values. You've got products A & B, for example. It costs $100, and the discount is 10%, so special $90 pricing is available. Product B costs $10 at a special price of 50% discount of $5. If a percentage of product B (50 percent off) is sorted out in the “Biggest Saving” list, it is indicated above product A. If you decide to sort by absolute prices, product A will appear in the list before product B.

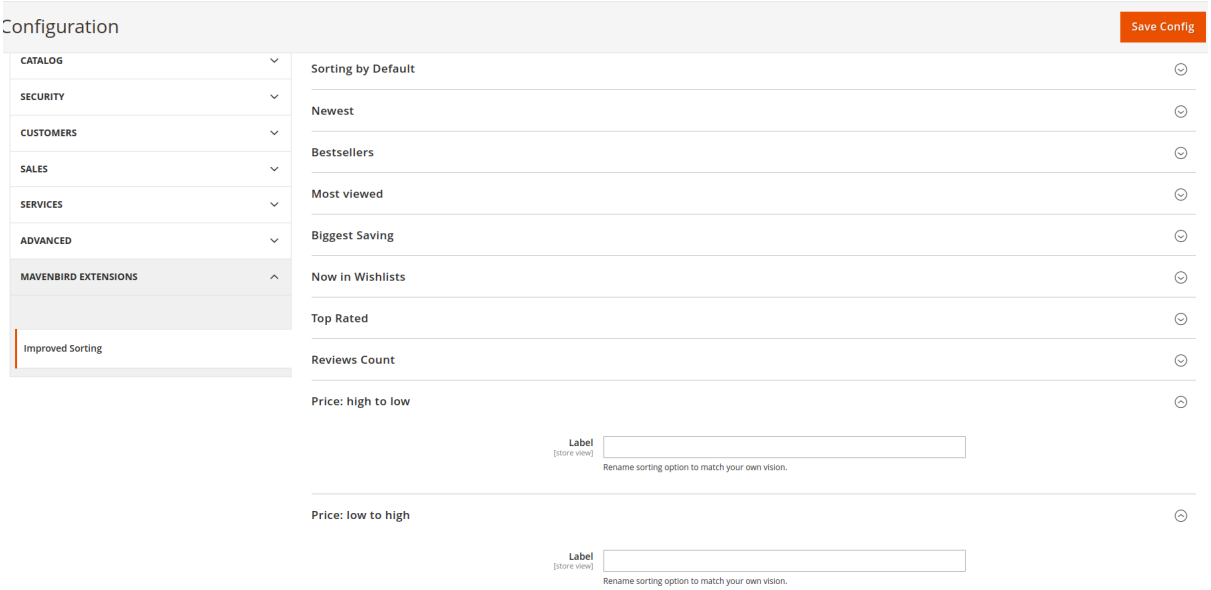


- Now in Wishlists - sorting option shows products added to their wishlists by other customers. In the 'Label' field, enter the option's frontend name, and specify the following period of update data.



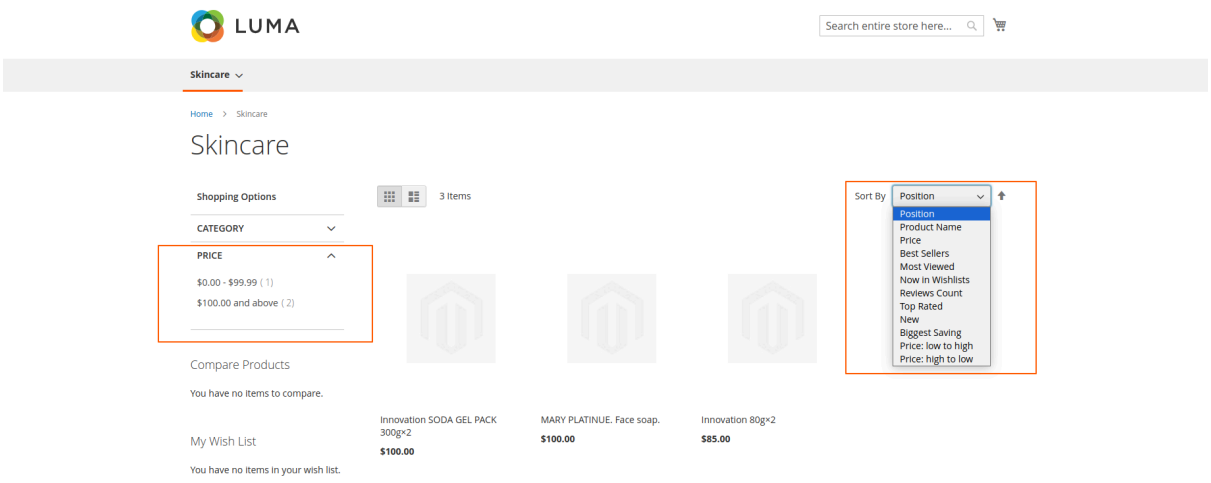
- Top rated - the high-rated products in the top of this option. Please enter the name of the option displayed on the frontend in the 'Label' field.

- Reviews count - option to the number of reviews sort products. Fill in the frontend name field 'Label.'



- Price: high to low or low to high - the price differentiation of this option sorts items. The title of this option can also be customised

Sorting on frontend



In addition to standard Magento options on the front end, the new sorting options and widgets allow your customers to find the right product faster. Additionally, Ratings and reviews by other people can really help your clients.

Thank you!
